

Wireless Technology in a Scanner

The TLC Bluetooth Wireless Scanner is a laser barcode scanner that incorporates Bluetooth® wireless technology for convenience and freedom of movement. It combines patented technology, high performance, and a sleek design.

Circulation and Inventory

At the circulation desk, the scanner includes autoscan capability. (We recommend the optional hands-free stand.) When you remove the scanner from the stand, it automatically switches to button controlled scanning. With this technology, the scanner can transmit scanned barcodes to your screen from up to 33 feet away. Switch to inventory mode, and the scanner stores up to 2,500 barcodes for uploading to Notepad (This incorporates the Extended memory Range Gate feature. Please note that you should use extended memory to prevent loss of scans during inventory.)

Lightweight and Easy to Use

The Bluetooth Wireless Scanner is lightweight (5.25 ounces) and comfortable to use. The Voyager's laser is easy to see and easy to line up on the barcode. Enjoy the freedom of wireless scanning with TLC's Bluetooth Wireless Scanner.
